

ELECTROMAGNETICS

FIRE-DOORS HOLDERS

STOP RANGE

Model

S02

Model

S00

The keeper plate S02 is composed of a steel disc and a plate with four holes for the fixing. The steel disc is amortized on the plate because of the elastic material in the between.

The keeper plate S00 is exclusively composed of a steel disk designed to be connected to the magnetic surface of the electromagnet. It's attached through a threaded blind hole.

STOP is the complete range of electromagnetics holders for fire doors certified UNI EN 1155. STOP means respect of all safety standards required by European Directives, it means warranty, reliability and long term use.

STOP range is available in several models, in different shapes and with different kind of performances in order to satisfy any request of installation.

Choosing the range STOP means different solutions: models to fix on the wall, models for the floor or the ceiling, adjustable models and extensible models along with a wide range of brackets and extension for every kind of security installation.

**certified model
UNI EN 1155:2003**
